Claims 3 and 15 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 3 and 15 merely label the step preceding the marking step as the "last step". It is noted that allowing the chip to sit for a period of time is a step. Therefore, there are an infinite number of steps in any given period of time immediately preceding the marking step.

Claims 19-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 19-23, it is not clear what is recited through use of "acceptable".

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Folk et al.

Folk et al discloses laser marking of chips suitable for shipping after testing without imprinting using a laser to expose selected portions of the surface of a reactive material (col.1, lines 22-24, col.2, lines 38-52 and col.4).

Claims 19-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Folk et al as applied to claims 1-18 above, and further in view of 19-23.

It would have been within the scope of one of ordinary skill in the art to compare the mark to another mark followed by labeling the mark as unacceptable and reworking the marking process because the additional steps would merely add complexity to the disclosed process without providing any advantages or producing any unexpected results. The examiner takes official notice that etching or abrading of a material forming the film of the mark to remove the film from a metal surface was known prior to applicant's invention. It would have been within the scope of one of ordinary skill in the art to combine the known process with that of Folk et al to enable formation of a mark as disclosed by Folk et al.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
